[The use of a pulsed traveling magnetic field in patients with chronic obstructive bronchitis]

[Article in Russian]

[Achkasov VV.](#)

A course treatment with pulse running magnetic field generated by ALIMP-1 unit of patients with chronic obstructive bronchitis provides a subjective response, higher exercise tolerance due to improved function of the external respiration. The inductors-solenoids are fixed tangentially on the chest by means of the jacket.

The Efficacy of the Use of Low-Frequency Electromagnetic Fields in Chronic Bronchitis

Iurlov VM, Eksareva TA, Dolodarenko VF.

Low frequency electromagnetic field therapy and treatment with pulsed electromagnetic fields were effective in patients suffering from chronic bronchitis in combined treatment with drug therapies in this double-blind, placebo-controlled study. Magnetic field therapy consisted of a total of 15, 15 to 20 minute daily exposures.
